

Meteorology Through the Eyes of A Storm Chaser & Meteorologist

1 Semester class FALL 2024

Instructor- Jen Toney; (580)747-8049

Grades- 4th-8th

Tuition-\$35/month, **one time supply fee-** \$30, **needs a dedicated folder for class** **Course**

Course Description:

Step into the world of those who throw caution to the wind... literally. Storm chasers aren't just "cowboys" or "adrenaline junkies." They are our early warning system. They keep everyone safe. Tornadoes, hurricanes, derechos, blizzards.... but it's not just based on guesses and gut instincts. It's based on science.... the science of meteorology. So come with us into a unit cram-packed with activity options, atmospheric science, physics, chemistry, language arts AND history (*never thought you'd say that, right? who knew that a tornado saved Washington and that the first storm chasers were created amidst world wars?*).... With a splash of adrenaline, you can cover all of your school subjects, have a place for dad to join in (if he wants) and get some true understanding into the world of meteorology and storm chasing. **"...whether you are the person afraid of the storm, or the person racing to catch up to one... you are in good company. Hero? Scientist? Thrill Seeker? Filled with fear? Come with us, this unit is for you."**
